Dept. Of Public Health Dentistry

PROBLEM BASED LEARNING

Date:16/3/19

Topic: Calculation of Mean,Median and Mode for survey.

Target population: Final Year students

Facilitator: Dr.Bharateesh.J.V/ Dr.Mythri.H/ Dr.Darshana.B

Objectives:

To understand the concept and of Mean,Median and Mode.

To calculate Mean, Median and Mode.

Groups:

The students were divided into small groups of 3-4 each for easy interaction.

Module/s:

Mean, median, and mode are the three measures of central tendency in statistics. The students were asked to identify the central position of any data set while describing a set of data. This is known as the measure of central tendency. Further they are taught to calculate Mean, Median and Mode for their survey.

Mean:

The arithmetic mean of a given data is the sum of all observations divided by the number of observations. For example, a cricketer's scores in five ODI matches are as follows: 12, 34, 45, 50, 24. To find his average score in a match, we calculate the arithmetic mean of data using the mean formula:

Mean = Sum of all observations/Number of observations.

Median

The value of the **middlemost observation**, obtained after arranging the data in ascending or descending order, is called the **median** of the data.

For example, consider the data: 4, 4, 6, 3, 2. Let's arrange this data in ascending order: 2, 3, 4, 4, 6. There are 5 observations. Thus, median = middle value i.e. 4.

To find the median, we need to consider if n is even or odd. If **n is odd**, then use the formula:

Median = $(n + 1)/2^{\text{th}}$ observation

If **n is even**, then use the formula:

Phone No: / Fax No: 0816-2275536

Web: www.ssdctumkur.org

Email: ssdctumkur@gmail.com

Median = $[(n/2)^{\text{th}} \text{ obs.} + ((n/2) + 1)^{\text{th}} \text{ obs.}] / 2$

Mode

The value which appears most often in the given data i.e. the observation with the highest frequency is called a **mode** of data. An easy way to remember mode is: **Most Often Data Entered**. A data may have no mode, 1 mode, or more than 1 mode. Depending upon the number of modes the data has, it can be called unimodal, bimodal, trimodal, or multimodal.

For ungrouped data, they were taught to identify the observation which occurs maximum times.

Mode = Observation with maximum frequency

When the data is continuous, the mode can be found using the following steps:

- **Step 1:** Find modal class i.e. the class with maximum frequency.
- **Step 2:** Find mode using the following formula:

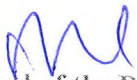

Mode = $l + \frac{f_m - f_1}{2f_m - f_1 - f_2} \times h + \frac{f_m - f_2}{2f_m - f_1 - f_2} \times h$

where,

- l = lower limit of modal class,
- f_m = frequency of modal class,
- f_1 = frequency of class preceding modal class,
- f_2 = frequency of class succeeding modal class,
- h = class width

Conclusion:

The students were made aware of the importance of Mean, Median and Mode and calculation of the same in the survey data they had collected. They were taught the technique which could be implemented in their student research projects.

Department Of Periodontics

PBL (Problem based learning)

Managing poor patient compliance towards oral hygiene maintenance

Participants: Group of Under-graduate Students

Facilitator: Dr. Sowmya

Module 1: Monday

Problem scenario:

A 28 year old female patient reported to the department with the complaint of bleeding and swollen gums since 2-3 months. Patient gives history of treatment for the same one year back.

Patient personal history revealed that she brushes her teeth once a day with a toothpaste and brush in a horizontal direction and spends around 3-5 mins. No other oral hygiene aids were used by the patient. Patient's medical and family histories were non contributory.

On clinical examination patient's oral hygiene was poor with grade 3 plaque and calculus deposits, gingival appeared erythematous with generalized bleeding on probing. Marginal and interdental gingiva were enlarged and edematous. No periodontal pockets were present.

Learning activity

A group of 5 third year students examined the patient.

The students analyzed the case under the following aspects:

1. Clinical examination.
2. Diagnosis of the condition.
3. Etiology of the case.
4. Classification of the condition.
5. Treatment approach to the condition.
6. Follow up and maintenance.

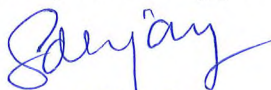

Module 1:- Monday

On the first day, students recorded the case history and clinically examined the case and findings were noted in the case history. Based on the analysis of the findings, students were asked to gather more information related to the present scenario with the help of text books, scientific articles and internet sources.

Module 2:- Wednesday

The group of students discussed with the moderator about the possible cause of the gingival enlargement and bleeding. The students are also encouraged to list out the possible causes of recurrence of the present case even after scaling one year back.

- Incomplete scaling previously

Email: ssdctumkur@gmail.com

- Poor compliance by the patient

Module 3:- Friday

The students discussed the treatment plan with the moderator. Since in the present scenario patient was not maintaining her oral hygiene well o more emphasis was given on patient education and motivation.

Students are encouraged to gather more information on different modes of patient education and motivation with the help of text books, scientific articles and internet resources.

Module 4:- Saturday

Students are asked to present and discuss the new information that they have gathered regarding different means of educating and motivating the patient.

Patient was subjected thorough supra and subgingival scaling. Students educated and motivated patient with verbal instructions, demonstrating the various oral hygiene instructions on the models, and showed some videos regarding brushing techniques, use of mouth wash and other oral hygiene aids. Patient was reviewed after two weeks for reevaluation.

Module 5:- Two weeks Post-op

The group members review patient and noticed marked improvement in the gingival health and also oral hygiene maintenance by the patient. The members outline the solution for the preset problem and this can in the form of report, summary and presentation. This helps the student to review and consolidate what they have learnt from the problem.

Dept. Of Public Health Dentistry

PROBLEM BASED LEARNING

Date: 16/2/2019

Topic: Randomization

Target population: Final yr

Facilitators: Dr. Bharatesh, Dr. Mythri & Dr. Darshana

Objectives: Students should be able to understand

1. Epidemiology and study designs
2. Bias
3. Why randomization and how it has to be conducted

Groups; Final year students 2019-20 regular batch

Module/s:

1. **Module:** Students were asked regarding Epidemiology and its uses in dentistry. Discussion was carried towards different method/design. Students enumerated advantages and disadvantages of each study design.

Group activity: three different study design Videos were shown students and told them to identify study designs.

Clarified the difficult terms like Epidemiology, cross sectional, cohort and prospective

2. **Module - Bias:** First students were divided into two groups and both group was asked one question on how many times they eat chocolate in a week? One group answered one on an average and other group mentioned not at all so facilitator started asking second group with leading questions till that group tell one in while. In this way types of bias were demonstrated to both the groups. Clarified the difficult terms like Bias

3. **Module - Randomization:** students were shown two bottles which were very alike differed only with alphabet on the bottle- A & B. Students were asked to pick envelopes which were in the bowl. Envelop was closed and non transparent. Later students were asked to open envelopes and read the alphabet what was mentioned in that envelop. Accordingly they were assigned to that particular group- A / B. This demonstrated them the randomly assigning of study participants in to groups without bias. Selection bias can be removed with randomization and hawthorne effect will be same in both groups. Clarified the difficult term Randomization

Conclusion: Students actively participated in the activities and understood the concept of bias and randomization.

Sri Siddhartha Dental College and Hospital, Tumkur Dept. Of Public Health Dentistry PROBLEM BASED LEARNING

Date: 25/4/2019

Topic: Planning for preventive programmes for children of Heggere area.

Target population: Final yr undergraduate students

Facilitator: Dr. Darshana B

Objectives:

Students should be able to

1. assess the knowledge, prevalence of dental problems among Heggere Population- situation analysis
2. Assess the availability of resources
3. Development of strategy and alternative strategies with achievable results within specified time
4. Priority assessment
5. Administration of duties and evaluation
6. Identifying constraints and path to overcome that constraint- progress evaluation
7. Evaluation of programme outcome

Groups; A group discussion was done with final yr students. Objectives were stated.

Module/s:

I. Module - Situation analysis: Students asked social determinants of health, myths, and social classes and how they are related to oral health. Accordingly they were directed to prepared closed ended questionnaire/ survey proforma to Assess KAP among Heggere population and WHO oral health survey to assess oral health needs among Heggere population. Asked them to conduct this survey on 20 members of out patient department.

Common attitude and myths enlisted and educative materials were prepared according to KAP related to oral health among heggere population.

Situation analysis - awareness of population and prevalence of oral diseases. With that how much improvement students are going to achieve with time span was discussed. Aim and objectives were enlisted.

SRI SIDDHARTHA DENTAL COLLEGE AND HOSPITAL

AGALAKOTE, B.H.ROAD, TUMKUR-572107, KARNATAKA.

Web: www.ssdctumkur.org

Email: ssdctumkur@gmail.com

Learning activity: Students were asked about known factors and slowly we took the discussion to their unknown factors such as situation analysis, how to conduct, methods, uses. Conducted survey among 20 pt of outpt dept. Clarified the difficult terms like objectives, aim, analysis

2. Module : Resource management and allocation: According to situation analysis, we looked for resource- Material, Man power and Money. Students were asked to enlist

Material: Health educative material, AV aids, Preventive materials-pit and fissures/ Topical Fluorides/ ART kit and instruments, equipments, Necessary material requirements water, light place etc

Man power: How many dental surgeons, house surgeons, final yr students, attenders participating in this

Formalities: Transportation, assistants, permissions etc

Learning activity: Students were asked about known factors - resources and discussed on how individual treatment for individual patient varies from group approach. Students were asked to write letter for permission to conduct programme, hierarchy of approach etc. Clarified the difficult terms like Resources allocation

3. Module-Strategy development with priority assessment: Students were asked to divide the needy population based on their treatment requirements - Primary, secondary and tertiary where primary will be application to other groups

Students were asked to allocate dental surgeons, students and assistants according to the requirement of primary / secondary and tertiary treatments and few for administration purpose who indeed can help where ever required

Each group and their members allotted with duties and time span to complete it.

Learning activity: Students were asked about known factors - Levels of preventions, modes of intervention. To reach goal/aim what paths / strategy they choose, if one strategy doesn't work then what is alternative path. Students were divided into four groups and they were asked to write flow chart of their team work. Clarified the difficult terms like Strategy,

4. Module-Identification of constraint: Students were asked to enumerate common constraint which can occur during or execution of treatment. And different methods to overcome these constraint. Each group will be assessed how much work has been completed at that particular time and difficulties faced by them. Clarified the difficult terms like constraints

5. Evaluation of programme outcome: Students were asked to evaluate what they enlisted as aim and objectives, were achieved or not. Clarified the difficult terms like Evaluation

Conclusion: All students actively participated in the activities and planned a preventive oral health programme among Heggere population (oral health education programme). Students have understood planning, evaluation and survey concepts through this PBL.

PROBLEM BASED LEARNING

Date: 19 & 26/5/2018

Topic: Sample & Sampling Methods

Target population: Final yr

Facilitators: Dr. Bharatesh, Dr. Mythri & Dr. Darshana B

Learning Objectives:

1. Able to understand the concept of population and sample
2. Able to differentiate different sampling methods

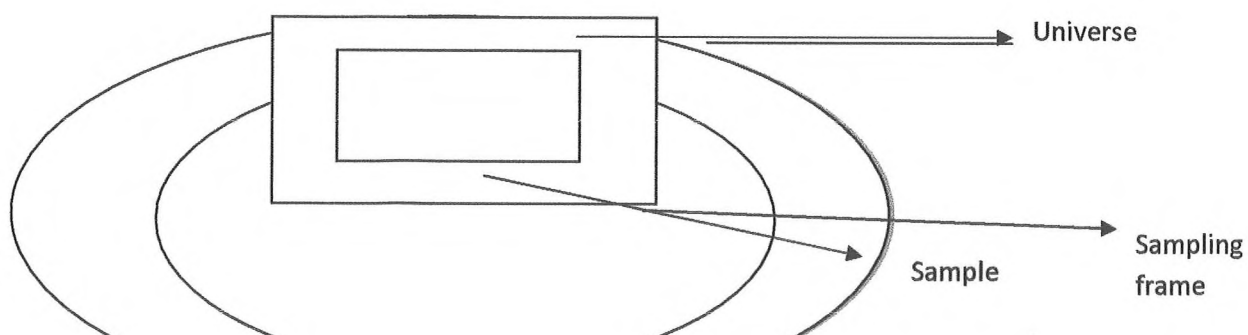

Problem definition:

Sample and Population: These two terms were made them to understand with day today examples. Later students were asked read the learning material provided them. So that which part they have not understood they can put as problem and gain new knowledge regarding that.

Team Structure:

Day 1: A group of ten students were present. We interacted in the class room. Before discussion started we allotted the different roles like scribe, tutor, leader and group members. Each was told regarding their duties. Facilitators, making sure students are staying on track and finding the resources they need.

The students started with discussion on sample, what it means, diagrammatic presentation, where other member added the use of sample over population. One of the member elaborated on census. Group members discussed what is the meaning of generalization. What and how population can get access to study, sampling frame, who is involved in study, sampling unit etc . Slowly the facilitators encouraged them by asking the sample selection. Again leader encouraged his other member to discuss the different methods to select sample, other member added the pros and cons of each sampling method.

Email: ssdctumkur@gmail.com

Enlisted different sampling methods:

- Probability sampling
 - Simple random
 - Stratified random
 - Systematic sampling
 - Cluster sampling
 - Area sampling
 - Sequential sampling

- Non probability sampling
 - Non probability
 - Judgment sampling
 - Quota sampling
 - Convenience sampling

Group members were clear about sample, population and different methods of sampling

Day 2: Facilitator gave few situations and asked the group members to select proper sampling methods for that particular situation. Later it was discussed why they selected that sampling method. Facilitator guided/clarified the doubts. Group member were applying their leaned concepts in selecting sample for given situation.

Conclusion: This PBL –on sample and sampling method helped the students to understand its basic concept.

Dept. Of Public Health Dentistry

PROBLEM BASED LEARNING

Date: 17/2/2018

Topic: Randomization

Target population: Final yr

Facilitators: Dr. Bharatesh, Dr. Mythri & Dr. Darshana

Objectives: Students should be able to understand

1. Epidemiology and study designs
2. Bias
3. Why randomization and how it has to be conducted

Groups; Final year students 2019-20 regular batch

Module/s:

1. Module: Students were asked regarding Epidemiology and its uses in dentistry. Discussion was carried towards different method/design. Students enumerated advantages and disadvantages of each study design.

Group activity: three different study design Videos were shown students and told them to identify study designs.

Clarified the difficult terms like Epidemiology, cross sectional, cohort and prospective

2. Module - Bias: First students were divided into two groups and both group was asked one question on how many times they eat chocolate in a week? One group answered one on an average and other group mentioned not at all so facilitator started asking second group with leading questions till that group tell one in while. In this way types of bias were demonstrated to both the groups. Clarified the difficult terms like Bias

3. Module - Randomization: students were shown two bottles which were very alike differed only with alphabet on the bottle- A & B. Students were asked to pick envelopes which were in the bowl. Envelope was closed and non transparent. Later students were asked to open envelopes and read the alphabet what was mentioned in that envelope. Accordingly they were assigned to that particular group- A / B. This demonstrated them the randomly assigning of study participants in to groups without bias. Selection bias can be removed with randomization and Hawthorne effect will be same in both groups. Clarified the difficult term Randomization

Conclusion: Students actively participated in the activities and understood the concept of bias and randomization.

DEPARTMENT OF ORAL PATHOLOGY & MICROBIOLOGY

PBL-PROBLEM BASED LEARNING

17/1/19

FIBROMA AND ITS DIFFERENTIAL DIAGNOSIS

Participants: Group of Interns

Facilitator: Dr.LikhithaSwamy H.R, Lecturer

Module-1:

Problem scenario:

Patient presenting with Growth in the gingiva since many days presenting with faint pink or reddish color, firm in consistency, sessile and non-tender in nature.

Elicit for hints or history form patients

- Ask for tooth pick or pin prick trauma
- Check for presence of stains & calculus
- Check for faulty or old restoration or any sharpness in tooth structure
- Check for presence of prosthesis (RPD / CD)
- Look for the presence of nerve tissue origin

Provisional diagnosis:

1. Pyogenic Granuloma
2. Irritation fibroma
3. Peripheral ossifying fibroma
4. Neurofibroma

Co-relate with clinical finding, patient history & Histopathological feature confirmatory diagnosis to be given.

DEPARTMENT OF ORAL PATHOLOGY & MICROBIOLOGY

PBL (Problem based learning)

Participants: Group of Under-graduate Students

Date :15/12/2018

Facilitator: Dr.G.Kokila, Professor& HOD.

Module-1:

Problem scenario: A 45 year old male patient complains of pain and swelling in his right upper molar region since 15 days. Clinical examination revealed root stump in relation to 25. There was diffuse swelling on buccal vestibule and palatal aspect i.r.t. 25. The oral hygiene was poor. There were no other decayed or restored teeth, third molars did not erupt.

IOPA radiograph revealed periapical Radiolucency in relation to root stump of 25.

The histologic examination of the excised tissue showed capsule, connective tissue with chronic inflammation, st.sq.nonkeratinised epithelium, ruston bodies, cholesterol clefts.

Learning activity

- Analyze the case
- List lesions which show periapical radiolucencies

Module 2:

- Learn clinical & histologic features of lesions withperiapical radiolucencies
- Rule out conditions and come to conclusion with clinical and histologic details.

DEPARTMENT OF ORTHODONTICS

Date: 09/03/2019

PROBLEM BASED LEARNING

Participants: Group of Post Graduate students

Facilitator: Dr Sridharan K, Prof & Head

Resource person: 1) Dr.Prasanna T R, Reader

2) Dr. Madhusudhan V, Reader

Module – 1

Problem Scenario: A 15 year old female patient complains of forwardly placed upper front teeth, on clinical examination number of tooth present

17,16,15,14,13,12,11	21,22,23,24,25,26,27
47,46,45,44,43,42,41	31,32,33,34,35,36,37

On Radiographic examination: Full set of permanent teeth with crown completed 3rd molars.

Provisional Diagnosis: Highly anxious patient

Learning activity on module -1

- Analyze the case
- Problem list
- Highly salivating anxious case

List the unknown

- Bonding in highly salivating patient
- How to manage debonding

List what needs to be done

- Bonding in highly salivating region
- Using different methods to control salivation
- To know about both Pharmacological and non-pharmacological methods to control salivation.

Module: 2(Thursday):

Students present & critically discuss the new information they gathered through text books, scientific articles, internet sources. They then review the case in the light of new knowledge acquired.

Module: 3(Saturday):
