SELF DIRECTED LEARNING: 2017-2018

A self directed learning activity has been scheduled to the final year students during Oral Medicine and Radiology theory class twice a year. Topic and reference material will be provided.

Guidelines for students

1. This will be an independent learning activity.
2. Topic will be provided.
3. Student is expected to search historic and current information about the topic, prepare a report and submit it within two weeks.
4. Students will be provided a priming scientific literature reference.
5. Reference materials for current literature should preferably be articles published in Scopus and Pub med indexed journals.
6. Reference material for historic information can be from textbooks and Wikipedia.
7. Student reports will be discussed individually.

DEPARTMENT OF ORTHODONTICS

Group Discussion /Microteaching /SDL 2017-2018

Management of a Hyper divergent case

Management of mutilated malocclusion group discussion was undertaken dated 23/04/2018 among post graduate students of the department. Moderator for group discussion was Dr. Madhusudhan V.

Patients presenting hyper divergent retrognathic phenotype demand complex orthodontic treatments. Etiologically, such phenotype mainly combines the vertical facial genotype with an inadequate mandibular posture. Such patients present three mandatory morphologic-functional features: a) deficient ratio between posterior and anterior facial heights, provoking a long and convex facial profile; b) deficient masticatory function, with weaker bite force when compared to normal and hypo divergent subjects and c) narrower dental arches, especially the maxillary one, with tendency of posterior cross bite occurrence. Oral breathing is another environmental factor involved in the development of facial hyper divergence, which evidence of cause-effect has been presented in primates. Facial hyper divergence has been related to clinical scenarios as enlarged adenoids, allergic rhinitis, enlarged tonsils, and obstructive sleep apnea. Eating habits and consequently muscle strength are environmental factors also related to facial hyper divergence.

Many therapeutic protocols have been presented for hyperdivergent retrognathic patients, for example: high-pull headgears, dental extractions, posterior bite-blocks and vertical-pull chin cup and orthodontic-surgical approaches which was explained by Dr. Madhusudhan V to the students.

Students had discussion and benefited with

- Etiology of development of hyper divergent malocclusion
- Various treatment protocols for the treatment of hyper divergent case.

Management of mutilated malocclusion

Management of mutilated malocclusion group discussion was undertaken dated 12/12/2017 among post graduate students of the department. Moderator for group discussion was Dr. Prasanna T R.

A female patient aged 35 years reported with mutilated occlusion with mid line shift, aggravation of skeletal Class II with posterior cross bite on patient's right side. This was a case of Skeletal Class II Div 1 malocclusion which had been treated previously by other operator with extraction of all 1st premolars except in upper right quadrant. On group discussion and multidisciplinary approach was discussed for that particular case was discussed with fixed functional therapy.

Students had discussion and benefited with

- How to manage mutilated case
- Different approaches to treat mutilated case
- Multidisciplinary approach to treat a case.
