## FEEDBACK FORM- ENRICHMENT COURSE/PBL

### Rating values:

a) Poor =1    b) Average=2    c) Good=3    d) Very good =4    e) Excellent=5

Please Circle the answer which most closely corresponds to your views about each statement

1. Department: *Oral medicine & radiology.*

2. Topic: *SCC - case - 1*

3. How well this enrichment course/PBL helped in terms of following statements

Sl. No.	Courses	EXCELLENT	VERY GOOD	GOOD	AVERAGE	POOR
1	Learning value (in terms of skills, concepts, knowledge, analytical abilities, broadening perspectives)		<i>✓</i>			
2	Applicability or relevance to real life situations		<i>—</i>			
3	Depth and pace of the course content		<i>—</i>			
4	Teaching method used		<i>✓</i>			
5	Overall rating of the enrichment/PBL course		<i>—</i>			

Any suggestions: *Nil.*

Thank you for your valuable feedback...

## Sri Siddhartha Dental College and Hospital, Tumkur Dept. Of Public Health Dentistry PROBLEM BASED LEARNING-online

**Date:** 17/10/2020

**Topic:** Randomization

**Target population:** Final yr

**Facilitators:** Dr. Bharatesh, Dr. Mythri & Dr. Darshana B

**Objectives:** Students should be able to understand

1. Epidemiology and study designs
2. Bias
3. Why randomization and how it has to be conducted

**Groups;** Final year students 2019-20 regular batch

**Module/s:**

4. **Module:** Students were asked regarding Epidemiology and its uses in dentistry. Discussion was carried towards different method/design. Students enumerated advantages and disadvantages of each study design.

Group activity: three different study design Videos were shown students and told them to identify study designs.

Clarified the difficult terms like Epidemiology, cross sectional, cohort and prospective

5. Module - Bias: First students were divided into two groups and both group was asked one question on how many times they eat chocolate in a week? One group answered one on an average and other group mentioned not at all so facilitator started asking second group with leading questions till that group tell once in while. In this way types of bias were demonstrated to both the groups. Clarified the difficult terms like Bias

6. Module - Randomization: students were shown two bottles which were very alike differed only with alphabet on the bottle- A & B. Students were asked to pick envelopes which were in the bowl. Envelop was closed and non transparent. Later students were asked to open envelopes and read the alphabet what was mentioned in that envelop. Accordingly they were assigned to that particular group- A / B. This demonstrated them the randomly assigning of study participants in to groups without bias. Selection bias can be removed with randomization and hawthorne effect will be same in both groups. Clarified the difficult term Randomization

## Dept. Of Public Health Dentistry

### PROBLEM BASED LEARNING

Date:25/3/17

Topic:Presentation of results of a conducted survey.

Target population: Final Year students

Facilitator: Dr.Bharateesh.J.V, Dr.Mythri.H, Dr.Darshana.B

Objectives:

To understand the methods and means of presentation of results in a conducted survey.

Groups:

The students were divided into small groups of 3-4 each for easy interaction.

Module/s:

The students are given a survey data which will contain all the relevant details of the population viz age groups,sex,occupation,economicstatus,diethistory,personalhabits,deleterious habits etc. They are asked to go through the data in detail.They will explained the importance and what are the means of representing results Viz:The Results section is a summary of the experimental outcome of the study. Results should include a concise verbal description of the outcome as well as tables and figures, showing statistical results and experimental error.Tables and figures should include legends explaining what they are summarizing. The students are are also made aware of techniques used in preparing graphs,barcharts,pie diagrams etc.

Conclusion:

The students were made to understand the methods used in presentation of data for a given survey. They were also taught to prepare bar diagrams, pie charts which could help them in student projects.

**Sri Siddhartha Dental College and Hospital, Tumkur**

**Dept. Of Public Health Dentistry**

**PROBLEM BASED LEARNING-online**

**Date: 16 & 23 /5/2020**

**Topic: Sample & Sampling Methods**

**Target population: Final yr**

**Facilitators: Dr. Bharatesh, Dr. Mythri & Dr. Darshana B**

**Learning Objectives:**

1. Able to understand the concept of population and sample
2. Able to differentiate different sampling methods

**Problem definition:**

Sample and Population: These two terms were made them to understand with day today examples. Later students were asked read the learning material provided them. So that which part they have not understood they can put as problem and gain new knowledge regarding that.

**Team Structure:**

Day 1: A group of ten students were present. We interacted in the class room. Before discussion started we allotted the different roles like scribe, tutor, leader and group members. Each was told regarding their duties. Facilitators, making sure students are staying on track and finding the resources they need.

The students started with discussion on sample, what it means, diagrammatic presentation, where other member added the use of sample over population. One of the member elaborated on census.

# SRI SIDDHARTHA DENTAL COLLEGE AND HOSPITAL

Web: [www.ssdtumkur.org](http://www.ssdtumkur.org)

Email: [ssdtumkur@gmail.com](mailto:ssdtumkur@gmail.com)

---

Group members discussed what is the meaning of generalization. What and how population can get access to study, sampling frame, who is involved in study, sampling unit etc . Slowly the facilitators encouraged them by asking the sample selection. Again leader encouraged his other member to discuss the different methods to select sample, other member added the pros and cons of each sampling method.

Enlisted different sampling methods:

## Probability sampling

- Simple random
- Stratified random
- Systematic sampling
- Cluster sampling
- Area sampling
- Sequential sampling

## Non probability sampling

- Non probability
- Judgment sampling
- Quota sampling

Email: [ssdctumkur@gmail.com](mailto:ssdctumkur@gmail.com)

## □ Convenience sampling

Group members were clear about sample, population and different methods of sampling

Day 2: Facilitator gave few situations and asked the group members to select proper sampling methods for that particular situation. Later it was discussed why they selected that sampling method. Facilitator guided/ clarified the doubts. Group member were applying their leaned concepts in selecting sample for given situation.

Conclusion: This PBL –on sample and sampling method helped the students to understand its basic concept.

## Department Of Periodontics

### PBL (Problem based learning)

#### Managing poor patient compliance towards oral hygiene maintenance

**Participants: Group of Under-graduate Students**

**Facilitator: Dr. Pushpalatha G**

#### Module 1: Monday

##### Problem scenario:

A 28 year old female patient reported to the department with the complaint of bleeding and swollen gums since 2-3 months. Patient gives history of treatment for the same one year back.

Patient personal history revealed that she brushes her teeth once a day with a toothpaste and brush in a horizontal direction and spends around 3-5 mins. No other oral hygiene aids were used by the patient. Patient's medical and family histories were non contributory.

On clinical examination patient's oral hygiene was poor with grade 3 plaque and calculus deposits, gingival appeared erythematous with generalized bleeding on probing. Marginal and interdental gingiva were enlarged and edematous. No periodontal pockets were present.

##### Learning activity

A group of 5 third year students examined the patient.

The students analyzed the case under the following aspects:

7. Clinical examination.
8. Diagnosis of the condition.
9. Etiology of the case.
10. Classification of the condition.
11. Treatment approach to the condition.
12. Follow up and maintenance.

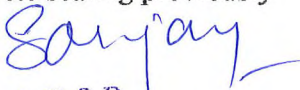

#### Module 1:- Monday

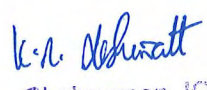

On the first day, students recorded the case history and clinically examined the case and findings were noted in the case history. Based on the analysis of the findings, students were asked to gather more information related to the present scenario with the help of text books, scientific articles and internet sources.

#### Module 2:- Wednesday

The group of students discussed with the moderator about the possible cause of the gingival enlargement and bleeding. The students are also encouraged to list out the possible causes of recurrence of the present case even after scaling one year back.

- Incomplete scaling previously

Email: [ssdctumkur@gmail.com](mailto:ssdctumkur@gmail.com)

- Poor compliance by the patient

## Module 3:- Friday

The students discussed the treatment plan with the moderator. Since in the present scenario patient was not maintaining her oral hygiene well o more emphasis was given on patient education and motivation.

Students are encouraged to gather more information on different modes of patient education and motivation with the help of text books, scientific articles and internet resources.

## Module 4:- Saturday

Students are asked to present and discuss the new information that they have gathered regarding different means of educating and motivating the patient.

Patient was subjected thorough supra and subgingival scaling. Students educated and motivated patient with verbal instructions, demonstrating the various oral hygiene instructions on the models, and showed some videos regarding brushing techniques, use of mouth wash and other oral hygiene aids. Patient was reviewed after two weeks for reevaluation.

## Module 5:- Two weeks Post-op

The group members review patient and noticed marked improvement in the gingival health and also oral hygiene maintenance by the patient. The members outline the solution for the preset problem and this can in the form of report, summary and presentation. This helps the student to review and consolidate what they have learnt from the problem.

## PROBLEM BASED LEARNING

Date: 09/09/21

**Participants: Group of post graduate student**

**Facilitator: Dr Mahesh**

### **Problem Scenario:**

A 78-year-old male patient reported to our department with a chief complaint of pain and swelling in mid face region due to road traffic accident. On examination the middle one third of face had slight swelling and oedema, bilateral ecchymosis in labial and buccal mucosa, with complete mobility of maxilla and anterior open bite and periodontal status was poor.

He was advised for Orthopantomogram (OPG), high-resolution computed tomography (HRCT) and systemic blood investigations. Based on clinical and radiographic features he was diagnosed with Lefort 1 fracture and his medical history revealed that he was under medication for diabetes, hypertension and hyperthyroidism.

### **Objective**

1. Analyse the case
2. List of hypothesis

Teaching and Learning Activity Module

#### **Module 1**

##### **List of the known**

Antibiotics and analgesics to relieve the pain and treat the condition

##### **List of the unknown**

Investigations which need to be done for definitive diagnosis

Modes of treatment available

Advantages and disadvantages of each mode of treatment

##### **List Of what needs to be done**

Further investigations to arrive at final diagnosis

Zygomatic suspension wiring

#### **Module 2**

Students present and critically discuss the new information they gathered through textbooks , scientific article , internet sources. They then review the case in the light of new knowledge acquired.

#### **Module 3**

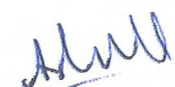

Members of the team work together to create a 'PRODUCT' that bring the problem to a conclusion. The product takes the shape of a report , summary and presentation . this helps the student to review and consolidate what they have learnt from the problem.

### **Conclusion**

At the end of the session the participants had gained comprehensive knowledge on lefort 1 fracture and zygomatic suspension wiring and were competent enough to handle the situation.

## Department of Periodontics

### PBL (Problem based learning) Process

#### Management of gingival recession

**Participants: Group of Under-graduate Students**

**Facilitator: Dr. Sanjay Venugopal**

#### Module 1: Monday

##### Problem scenario

A 22 yr old female patient complains of receding gums in the lower front tooth. She gives history of receding gums since 2 yr and complains of sensitivity on taking hot and cold. She also complains of poor esthetics.

Clinical examination revealed 41 had recession of gums which were extending upto the muco gingival junction.

The oral hygiene was poor, and had deposits on the affected tooth.

The gingiva was erythematous and there was bleeding of gingiva on gentle probing.

Radiographic evaluation did not show any loss of bone interdentially and there was no periapical radiolucency associated with the tooth.

##### Learning activity

A group of 4 final year students examined the patient.

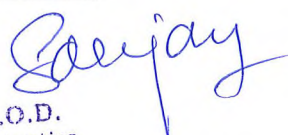

The students analyzed the case under the following aspects:

1. Clinical examination.
2. Radiographic evaluation.
3. Diagnosis of the condition.
4. Etiology of the case.
5. Classification of the condition.
6. Treatment approach to the condition.
7. Follow up and maintenance.

#### Module 1:- Monday

On day one the students recorded the case history and clinically examined the case. The radiographic evaluation of the case was done and finding were noted in the case history.

#### Module 2:- Wednesday

---

The group of students discussed with the moderator about the possible cause of the gingival recession and in general the etiology of recession. The students discussed regarding the classification of the gingival recession and then classified the condition.

### Module 3:- Friday

The students discussed the treatment options with the moderator. The reasons for treating the condition were discussed like esthetics, sensitivity and difficulty in brushing.

The students discussed the means of surgically correcting the defect and classified the treatment modalities.

### Module 4:- Saturday

Since the case required orthodontic intervention, Dr. Vadiraj Udupa was called for the case discussion.

Success rate of the treatment and percentage of relapse over long term was discussed critically through information gathered through text book, scientific articles and internet sources.

### Module 5:- Monday

Members of the team work together to create a 'PRODUCT' that brings the problem to a conclusion. The product takes the shape of report, summary and presentation. This helps the student to review and consolidate what they have learnt from the problem.

## **PROBLEM BASED LEARNING**

**Date: 22/01/21**

**Participants: Group of post graduate student**

**Facilitator: Dr Marimallappa TR**

**Problem Scenario:**

**Case report:**

A 35 year old male patient reported with a chief complaint of swelling and discomfort in the inner side of lower anterior teeth since one month. The swelling which was gradual in progression, associated with pain and bleeding on trauma while eating or brushing. He gave a history of recurrence three times in the last one month at the same site. He gave history of a similar lesion 4 days back at the same site for which the patient had undergone surgical excision. On clinical examination, a localised gingival swelling pink to red in colour measuring 1 cm X 0.75 cm was present with respect to lingual aspect of left mandibular central incisor which was bleeding on probing that area. The growth was firm on palpation, non - tender with absence of discharge. Physical examination revealed no cervical lymphadenopathy or any other abnormality. On hard tissue examination there was no trauma form occlusion no mobility detected. There was moderate supragingival and sub gingival calculus present in that tooth. Patient presented no relevant medical history. The periapical radiograph showed no detectable bony defect. Based on the history, clinical and radiographic features a provisional diagnosis of pyogenic granuloma was made and the lesion was planned for excisional biopsy under local anesthesia. First a thorough conventional non - surgical full mouth scaling and root planning was performed with curesttes. There was moderate bleeding which could be controlled within a few minutes on applying pressure with gauze. After local anesthesia, with the help of a 15 no. BP blade the lesion was excised completely by trimming the remnants of soft tissue to prevent recurrence of the lesion. Antibiotics and analgesics were prescribed for 1 week. The excised tissue was then sent in formalin for histopathological examination. Histopathological examination of H and E stained sections show epithelium and connective tissue. Epithelium is parakeratinized stratified squamous type. The histopathological examination confirmed the clinical diagnosis of pyogenic granuloma. The patient was recalled after a week and the excised area was evaluated. Healing was satisfactory.

**Objective**

1. Analyse the case
2. List of hypothesis Teaching and Learning activity modules

**Module 1**

**List of the known**

Antibiotics and analgesics to relieve the pain and treat the condition

**List of the unknown**

Investigations which need to be done for definitive diagnosis

Modes of treatment available

Advantages and disadvantages of each mode of treatment

**List Of what needs to be done**

Further investigations to arrive at final diagnosis

Surgical excision of the lesion

**Module 2**

Students present and critically discuss the new information they gathered through textbooks , scientific article , internet sources. They then review the case in the light of new knowledge acquired.

**Module 3**

Members of the team work together to create a 'PRODUCT' that bring the problem to a conclusion. The product takes the shape of a report , summary and presentation . this helps the student to review and consolidate what they have learnt from the problem.

**Conclusion** At the end of the session the participants had gained comprehensive knowledge on recurrent pyogenic granuloma and were competent enough to handle the situation..

## **PROBLEM BASED LEARNING**

**Date: 28/9/20**

**Participants: Group of post graduate student**

**Facilitator: Dr Supriyo Pal**

### **Problem Scenario:**

A 48-year-old male presented with nasal obstruction and headache to the department of otolaryngology. He denied postnasal drainage, diplopia, hyposmia, epistaxis, facial numbness and any impairment in his visual acuity. Computed tomographic (CT) scan of the paranasal sinuses showed an isodense soft tissue mass of the left ethmoid sinus with extension to the orbit. The patient was then underwent endoscopic sinus surgery. The Histopathological result was granulomatous inflammation. The patient had no treatment after discharged. 5 months later, the patient presented with swelling of the left eye. Magnetic resonance imaging (MRI) of the paranasal sinuses showed the left ethmoid sinus component of the mass with extension to the orbit had heterogeneous hyperintensity on T2-weighted images (T2WI). The patient was underwent endoscopic sinus surgery again. Both the frozen section and postoperative pathology revealed granulomatous inflammation. The patient underwent no treatment after discharged again. One year after the second operation, the patient presented with pained proptosis of the left eye. On physical examination, his visual acuity was normal. Laboratory investigations demonstrated a white blood cell count of  $15.02 \times 10^9$  /L, absolute neutrophil count of  $12.31 \times 10^9$  /L, lymphocytes count of  $1.91 \times 10^9$  /L, hemoglobin count of 145 g/L, platelets. Axial MRI of paranasal sinuses showed the left ethmoid sinus component of the mass with extension to the orbit had heterogeneous hyperintensity on T2WI (arrow). count of  $283 \times 10^9$  /L. Hepatitis B virus surface antigen (HBsAg) +, hepatitis B e antibody (HBeAb) +, hepatitis B core antibody (HBcAb) +, Human Immunodeficiency Virus antibody (HIVAb) -. Computed tomographic (CT) scan of the paranasal sinuses showed an isodense soft tissue mass of the left ethmoid sinus with extension to the orbit and had a unclear boundary with the eyeball (Figure 4). The patient underwent orbital exenteration and debridement adjacent to the orbital bone. After surgery, the patient was commenced on 3 months course of 400 mg orally fluconazole treatment. Periodic acid Schiff stain and alcian blue were conducted in the pathological specimens which revealed cryptococcus infection

### **Objective**

- 1 Analyse the case
2. List of hypothesis Teaching and Learning activity modules

### **Module 1**

#### **List of the known**

Antibiotics and analgesics to relieve the pain and treat the condition

#### **List of the unknown**

Investigations which need to be done for definitive diagnosis

Modes of treatment available

Advantages and disadvantages of each mode of treatment

#### **List Of what needs to be done**

Further investigations to arrive at final diagnosis

Surgical excision of the lesion

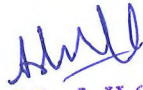

### **Module 2**

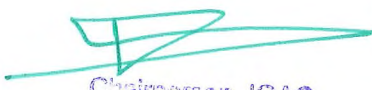

Students present and critically discuss the new information they gathered through textbooks, scientific article, internet sources. They then review the case in the light of new knowledge acquired.

### **Module 3**

Members of the team work together to create a 'PRODUCT' that bring the problem to a conclusion. The product takes the shape of a report, summary and presentation. This helps the student to review and consolidate what they have learnt from the problem.

**Conclusion** At the end of the session the participants had gained comprehensive knowledge on cryptococcosis and were competent enough to handle the situation.

## PROBLEM BASED LEARNING

Date: 28/01/20

**Participants:** Group of post graduate student

**Facilitator:** Dr Ashok Kumar KR

### **Problem Scenario:**

A 35-year-old woman was referred for evaluation of swelling in the left mandibular body. The patient stated that the mass had been gradually increasing in size since 6 months. The past medical and dental histories were non-contributory. Also the family history was not contributory. Clinical examination revealed a small localized swelling measuring approximately  $5 \times 2$  cm in size in the left body of mandible in premolar molar region. Swelling was bony hard in consistency and asymptomatic completely. On examination, no lymphadenopathy was detected. On intraoral examination obliteration of buccal vestibule in premolar molar region was noted. No abnormality was detected in relation to the vitality of teeth in the affected area. There was no mobility or displacement of any teeth. Diagnostic guidelines including complete hemogram, serum calcium, serum phosphorus, serum alkaline phosphatase were suggestive of no abnormalities. A clinical diagnosis of benign odontogenic tumor was made.

In radiographic evaluation, mandibular occlusal cross-sectional view showed region of cortical expansion in the left premolar-molar region. Orthopantomograph (OPG) revealed a mixed radiolucent-radiopaque lesion of size approximately  $6 \times 4$  cm extending from 34 to 37 regions and superiorly from apical portion of 36 and 37 to inferiorly upto the superior band of inferior border of mandible. The borders of the lesion were non-corticated, irregular but well defined and showed some amount of scalloping especially in the supero-lateral aspect. Computed tomographic (CT) scan revealed heterodense lesion with irregular expansion of buccal and lingual cortical plates and with central foci of calcification. These findings led to a radiographic diagnosis of ossifying fibroma. OPG and CT scan also revealed another single oval, ill-defined radiopaque lesion superimposed on the apical portion of 45 which was suggestive of cementoblastoma or idiopathic osteosclerosis. With a working diagnosis of central ossifying fibroma, the patient was advised surgical excision of the lesion.

### **Objective**

1. Analyse the case
2. List of hypothesis Teaching and Learning activity modules

### **Module 1**

#### **List of the known**

Antibiotics and analgesics to relieve the pain and treat the condition

#### **List of the unknown**

Investigations which need to be done for definitive diagnosis

Modes of treatment available

Advantages and disadvantages of each mode of treatment

#### **List Of what needs to be done**

Further investigations to arrive at final diagnosis

Surgical excision of the lesion

### **Module 2**

Students present and critically discuss the new information they gathered through textbooks, scientific article, internet sources. They then review the case in the light of new knowledge acquired.

### **Module 3**

Members of the team work together to create a 'PRODUCT' that bring the problem to a conclusion. The product takes the shape of a report, summary and presentation. This helps the student to review and consolidate what they have learnt from the problem.

### **Conclusion**

At the end of the session the participants had gained comprehensive knowledge on central ossifying fibroma and were competent enough to handle the situation.

## DEPARTMENT OF ORAL PATHOLOGY & MICROBIOLOGY

PBL-PROBLEM BASED LEARNING

19/1/21

### FIBROMA AND ITS DIFFERENTIAL DIAGNOSIS

**Participants: Group of Interns**

**Facilitator: Dr.LikhithaSwamy H.R, Lecturer**

**Module-1:**

**Problem scenario:**

Patient presenting with Growth in the gingiva since many days presenting with faint pink or reddish color, firm in consistency, sessile and non-tender in nature.

Elicit for hints or history form patients

- Ask for tooth pick or pin prick trauma
- Check for presence of stains & calculus
- Check for faulty or old restoration or any sharpness in tooth structure
- Check for presence of prosthesis (RPD / CD)
- Look for the presence of nerve tissue origin

**Provisional diagnosis:**

1. Pyogenic Granuloma
2. Irritation fibroma
3. Peripheral ossifying fibroma
4. Neurofibroma

Co-relate with clinical finding, patient history & Histopathological feature confirmatory diagnosis to be given.

## DEPARTMENT OF ORAL PATHOLOGY & MICROBIOLOGY

### PBL (Problem based learning)

**Participants: Group of Under-graduate Students** Date :15/12/2020

**Facilitator: Dr.G.Kokila, Professor& HOD.**

#### **Module-1:**

**Problem scenario:** A 45 year old male patient complains of pain and swelling in his right upper molar region since 15 days. Clinical examination revealed root stump in relation to 25. There was diffuse swelling on buccal vestibule and palatal aspect i.r.t. 25. The oral hygiene was poor. There were no other decayed or restored teeth, third molars did not erupt.

IOPA radiograph revealed periapical Radiolucency in relation to root stump of 25.

The histologic examination of the excised tissue showed capsule, connective tissue with chronic inflammation, stratified nonkeratinised epithelium, ruston bodies, cholesterol clefts.

#### **Learning activity**

- **Analyze the case**
- **List lesions which show periapical radiolucencies**

#### **Module 2:**

- **Learn clinical & histologic features of lesions with periapical radiolucencies**
- **Rule out conditions and come to conclusion with clinical and histologic details.**

Date: 12/04/2021

### PROBLEM BASED LEARNING

**Participants:** Group of Post Graduate students

**Facilitator:** Dr Prasanna T R, Prof & Head

**Resource person:** 1) Dr. Madhusudhan V, Reader

2) Dr. Chethan Kumar D, Senior Lecturer

#### Module – 1

**Problem Scenario:** A 12 year old female patient complains of missing teeth in the lower right, lower left tooth region and irregularly placed upper front teeth. On clinical examination number of tooth present

16,55,54,53,12,11	21,63,64,65,26
85,84,83,82,41	31,73,74,75

**On Radiographic examination:** Impaction of teeth in relation to 36 and 46

17,16,15,14,13,12,11	11,22,23,24,25,26,27
47,46,45,44,43,42,41	31,32,33,34,35,36,37

**Provisional Diagnosis:** Impaction of molar with tendency for cystic transformation

#### Learning activity on module -1

- Analyze the case
- Problem list
- Impacted lower molars

#### List the unknown

- Dentigerous cyst ?
- Management of impacted molars.

## Module: 2(Thursday):

Students present & critically discuss the new information they gathered through text books, scientific articles, internet sources. They then review the case in the light of new knowledge acquired.

## Module: 3(Saturday):

Member of the team work together to create the “**product**” that brings the problem to a conclusion. The product takes the shape of a report, summary and presentation. This helps the student to review & consolidate what they have learnt from the problem.

## Problem Based Learning

Date: 28/02/2020

**Participants:** Group of Post Graduate students

**Facilitator:** Dr. Chetak Shetty, Professor

**Resource person:** 1) Dr. Vadiraj Udupa, Professor  
2) Dr. Prasanna T R, Reader

### Module – 1

**Problem Scenario:** A 32 year old female patient complains of missing tooth in the upper left anterior region, irregularly placed lower front teeth.

On clinical examination: Peg lateral irt 12, clinically missing 22, gingival recession irt 31 & rotated 35 which is in cross bite.

**On Radiographic examination:** Reveals congenitally missing 22 and in adequate bone support irt 31.

**Provisional Diagnosis:** Angle's Class I malocclusion with congenitally missing 22, peg shaped 12, gingival recession irt 31.

### Learning activity on module -1

- Analyze the case
- List the problem on priority base
- Congenitally missing teeth
- Abnormality in shape of teeth ( peg shaped lateral incisor)

### List the unknown

- Gingival zennith
- Different options for replacement of missing lateral incisor
- Torque problem associated with different replacement methods
- Esthetic management of peg shaped lateral incisor

### List what needs to be done

- Creating optimal space for buildup of peg shaped lateral incisor.
- Biomechanical options pertaining to the case
- Substituting canine into lateral incisor & 1<sup>st</sup> premolar as canine.
- Options of intentional RCT & gingivoplasty.

### Module: 2 (Thursday):

Students present & critically discuss the new information they gathered through text books, scientific articles, internet sources. They then review the case in the light of new

### PBL (Problem Based Learning)

**TITLE:** Amelogenesis imperfecta

**PARTICIPANTS:** Group of Postgraduates and under graduates

**FACILITATOR:** Dr. Rajashekar Reddy, Reader, Department of Pedodontics and Preventive dentistry, SSDC, Tumkur

**DATE:** 12/04/2021

**MODULE:** 1

#### PROBLEM SCENARIO:

A 11 year old girl came with the chief complaint of discoloration in the upper front tooth since 4 years.

Past dental history- first dental visit

Medical history-nothing significant

**CLINICAL EXAMINATION:-** Discoloration of upper front tooth with intrinsic staining and generalized pitting. No abnormalities were detected in soft tissue.

#### Treatment options –

1. Veneering
2. Polycarbonate crowns

Treatment done- Veneering done irt 11,12,13,21,22,23
